Step 1: Assemble Base

Drill pocket holes for 1-1/2" thick material and pocket holes for 3/4" thick material (top) as shown. Assemble base using 1-1/4" pocket screws and 2" wood screws.

Remaining pocket holes are for final assembly and screws should exit toward the bench top.

Finishing

After filling the screw holes on the sides and sanding everything we stained the top and the base with Early American wood stain from Rustoleum. Then Jamie applied Vaseline to the areas we wanted to distress. We then followed that with Zinsser's Stain Blocking Primer and flat white paint (not shown).
